EEEE3054 Coursework 2 Marking Rubric

Student ID:

Student Name:

2.1 Energy Supplies – 30 Marks

Level	Criteria
Fail 0	Section missing, or unable to meet the next rubric level.
Unsatisfactory [5]	A location has been used and one renewable energy resources has been considered
Pass [10]	The correct location is used. Two renewable energy resources have been identified and compared

The above pass requirement must be met before any criteria in section below can be assessed

[8 max]	**A wide range of different renewable energy sources have been considered. Numerical evidence has been gathered and used to show the potential of each option. Each option has a graph, image or table to support the argument.**			
2 Sources [0]	3+ Sources are well defined [2]	4+ Sources are well defined [4]	5+ Sources are well defined [6]	6+ Sources are well defined [8]

[7 max]	**The considered resources are compared against each other qualitatively and quantitively. The best source to use for this location is clearly stated**			
Not present [0]	Some (capped here if best source not state) [2]	Most [4]	Fully met [5]	Exceeded [7]

[5 max]	**Effective use of data resources. The data has come from a wide range of sources and is presented in an effective and non-repetitive way, utilising graphs and tables.**			
Not present [0]	Some [2]	Most [3]	Fully met [4]	Exceeded [5]

2.2 Energy Conversion – 25 Marks

Level	Criteria
Fail 0	Section missing, or unable to meet the next rubric level.
Unsatisfactory [5]	The student makes some attempt at providing a system diagram and calculating the energy produced, however it has many mistakes
Pass [10]	There is a clear system diagram. There is a calculation of energy produced that is mostly correct.

The above pass requirement must be met before any criteria in section below can be assessed

[5 max]	**The system diagram is the students own work and clearly details all relevant components.**			
No Diagram [0]	An attempt is made but key components missing [2]	A generic diagram is presented that is taken from a source [3]	Fully system diagram, bespoke to the report [4]	Exceeded [5]

[5 max]	**The system is sized to produce the correct amount of energy. The calculations for this must be shown. This must not be below the energy demand of the centre or exceed by an unacceptable amount.**			
Not Present [0]	An attempt has been made but there are major mistakes [2]	An attempt has been made but there are minor mistakes [3]	Correct calculations and amount of energy [4]	Exceeded [5]

[5 max]	**The energy storage quantity is determined. This must use the energy production and availability of energy to determine the size.**			
Not Present [0]	An attempt has been made but there are major mistakes [2]	An attempt has been made but it is not based on the energy available [3]	Fully Met [4]	Exceeded [5]

2.3 Cost and Emission – 30 Marks

Level	Criteria
Fail 0	Section missing, or unable to meet the next rubric level.
Unsatisfactory [5]	An attempt is made at costing the system, but there are significant errors.
Pass [10]	The student provides a reasonable costing of the system and makes some comparison versus another energy source

The above pass requirement must be met before any criteria in section below can be assessed

[6 max]	**There is a detailed cost break down, showing the cost of each component. Expected lifetimes. And running costs. Each component is referenced.**			
Not Present [0]	Some [2]	Most [3]	Fully Met [5]	Exceeded [6]

[3 max]	**Calculation of CO2 savings using RE**		
Not Present [0]	Estimate of CO2 from non-renewable [1]	Estimate of CO2 from non-renewable and renewable [2]	Savings Calculated [3]

[6 max]	**The proposed system should be compared against another. Comparisons should give evidence as well as stating which is better.**			
Not Present [0]	1+ Comparison fully detailed or 2+ but poorly justified [2]	2+ Comparison fully detailed or 4+ but poorly justified [3]	3+ Comparison fully detailed [5]	Exceeded [6]

[5 max]	**Critique of Generative AI (If Generative AI not used, "Costs and Emissions" section will be averaged excluding this**			
Not Present [0]	Qualitative critique [2]	Quantitative Critique [3]	A deep dive critique is performed, investigating the references stated [4]	Exceeded [5]

2.4 Presentation – 15 Marks

Level	Criteria
Fail 0	Student did not attend the presentation.
Unsatisfactory [3]	Explanation of coursework is limited and confused.
Pass [6]	The student provides a reasonable costing of the system and makes some comparison versus another energy source

The above pass requirement must be met before any criteria in section below can be assessed

[3 max]	**The delivery and explanation are effective**		
Not Present [0]	Some [1]	Most [2]	Fully Met [3]

[3 max]	**The slide is well structured. Using headings, figure and table captions.**		
Not Present [0]	Some [1]	Most [2]	Fully Met [3]

[3 max]	**Questions are expertly handled**		
Not Present [0]	Some [1]	Most [2]	Fully Met [3]
