

Final Year Project Thesis

This assessment aims to demonstrate your achievements in your project in a professional document, describing how you delivered on your target specification and the engineering choices you have made in doing so. The project is an enormous undertaking, and you will have invested significant time. To be successful, this effort needs to be well structured, with explicit reference to the marking rubric. A good thesis will allow the reader to accurately judge the progress and decisions made during the course of your project.

You will present a clear specification for what needs to be achieved in your project and underpin your chosen methods to meet the specification successfully, how you validated this success, and your reflections on project management and your learning journey as a professional engineer.

The following are the guidelines for preparing the thesis to fulfill the requirements of the undergraduate programme.

Length

The total length of the thesis main body **must not exceed 60 pages**, **inclusive of references but excluding front matter and appendices**. Authors should utilise the appendices for all secondary or supporting data to ensure the main text remains concise and focused.

Front Matter

The front matter should include the following components:

- Title Page – Use the template provided in the *Resources* section on the Moodle page.
- Abstract – Maximum one page long.
- Acknowledgements
- Table of Contents
- List of Figures
- List of Tables
- List of Abbreviations (if applicable)

Suggested Chapter Structure

1. Introduction
2. Literature Review
3. Methodologies / System Design and Implementation
4. Results and Discussion
5. Conclusion and Future Work

Appendices

Formatting Guidelines

- **A4** page format
- **Font**: Times New Roman, 12 pt. Smaller fonts are allowed for tables and diagrams.
- **Line Spacing**: Single
- **Margins**: 1 inch (2.54 cm) on all sides.
- **Page Numbering**:
  - Lower case Roman numerals for front matter (i, ii, iii…)
  - Arabic numerals for main contents (1, 2, 3…)
- **Headings:**
  No specific arrangement is required for the numbering of topics and sub-topics but, whatever arrangement is adopted, it must be consistent.
- **Body Text:**
  The body text should be justified.
- **Figures & Tables:**
  - Centered, numbered (e.g., Figure 3.1)
  - Caption below figure, above table.
  - Captions should be **centered if they consist of a single line**; otherwise, they should be **justified**.
- **References:**
  - It is recommended to use the IEEE referencing style.
  - Ensure the citation style is consistent throughout the document.
